Amendments to the Claims

Please amend Claims 1, 7, and 8. The Claim Listing below will replace all prior versions of the claims in the application:

Claim Listing

1. (Currently Amended) A method for mapping business and engineering processes, comprising the steps of:

giving users access to a system for generating an emergent model;
publishing inputs and/or outputs of data objects and/or function objects
generated by the users;

subscribing to the published inputs and/or outputs of data objects and/or function objects generated by the users, thereby creating a network of linked inputs and/or outputs of data objects and/or function objects;

analyzing and displaying the network of linked inputs and/or outputs, resulting in a map of the business and engineering processes; and

wherein the <u>network of linked inputs and/or outputs of data objects and/or function objects is created in a manner free of a central coordinating computing device function objects are implemented by computer code that is run on distributed systems in a non-centrally controlled manner; and</u>

wherein the data objects and/or function objects generated are used in business and engineering processes.

2. (Previously Presented) The method of Claim 1 wherein at least a part of the configuration of the network of linked inputs and/or outputs of data objects and/or function objects is predefined and used to determine which data objects and/or function objects are generated on which of the computing devices in the computer network.

- 3. (Original) The method of Claim 1 wherein a user interface is defined that displays the data objects and/or function objects on a computing device on the computer network using a client process that communicates with a server process wherein the data objects and/or function objects can be viewed on any computing device connected to the computer network.
- 4. (Original) The method of Claim 1 wherein the data objects and/or function objects are stored in logical groups.
- 5. (Previously Presented) The method of Claim 1 wherein references to the data objects and/or function objects are published using electronic media, print media or human conversation.
- 6. (Original) The method of Claim 1 wherein the step of generating the data objects and/or function objects provides an interface mapping for data objects and/or function objects stored in application programs, databases or computer code libraries.
- 7. (Currently Amended). The method of Claim 1 wherein the function objects are implemented by computer code that is compiled in a non-centrally controlled manner, dynamically linked and evaluated at runtime.
- 8. (Currently Amended). The method of Claim 1 wherein the function objects are implemented by computer code that is interpreted in a non-centrally controlled manner and evaluated at runtime.
- 9. (Previously Presented) The method of Claim 1 further comprising the step of sending or receiving messages between the linked inputs and/or outputs of data objects and/or function objects.

- 10. (Previously Presented) The method of Claim12 wherein the predefined criteria is based upon message source, message destination or message contents.
- 11. (Previously Presented) The method of Claim 1 further comprising:

 identifying a user of the emergent model and assigning appropriate read,
 write, execute and administrative permissions to the user on a per data objects
 and/or function objects basis, the permissions being used to limit access to a
 specific subset of the data objects and/or function objects.
- 12. (Previously Presented) The method of Claim 9 wherein the sending or receiving messages can be enabled or disabled based on predefined criteria.
